FULLTEC

Description

FULLTEC BORON SWEET MAX

Boron Sweet Max is a high-performance product that combines nutrition with trehalose (high-performance sugar), providing greater crop resistance to weather stress. When combined with biological products applied to the field, it increases the viability and protection of these microorganisms, in addition to contributing to plant health, delivering results that are superior to the use of common sugar.

Benefits

Biological Protection: Boron Sweet Max protects biological products, lowers the risk of dehydration and increases nutrient availability.

Defense Mechanisms: Its balanced, high-tech composition stimulates the increase of the plant's defense enzymes, contributing to greater health.

Stress Mitigation: It increases plants' tolerance to water stress, reducing damage caused by lack of water and protecting productivity.

Positioning

Vegetative / Reproductive

RATES AND HOW TO USE

Rates:

0.5 lbs/acre

Composition:

Boron
Trehalose (sugar)
