FULLTEC DRONE

Your trusted partner for aerial applications

sprayTec®

Use it Once, Trust it Always

DESCRIPTION

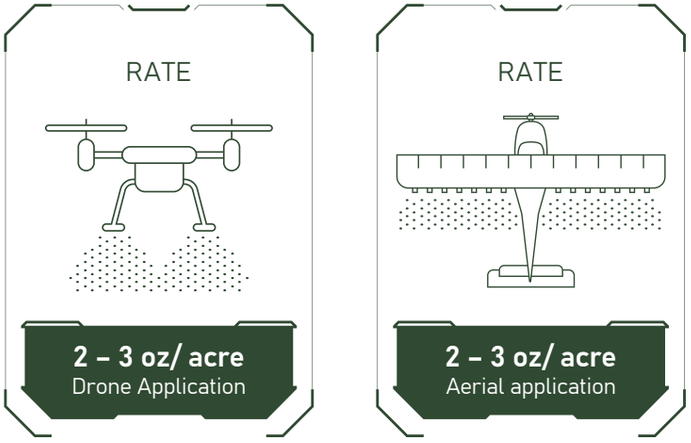
Aerial application presents unique challenges compared to ground application, primarily due to the low volumes of water typically used, which can make coverage, compatibility, and drift control more difficult. Each load sprayed by aerial applicators comes with these concerns, and overcoming them is key to achieving effective results. Fulltec Drone is designed to directly address these challenges, providing heightened compatibility across tank mixes and improved drift control. By ensuring the product stays on target and is delivered efficiently, Fulltec Drone helps aerial applicators maximize performance and consistency in every application.

BENEFITS

APPLICATION - *Fulltec Drone is a product developed especially for drone applications, standardizing droplets, reducing drift, and enhancing the absorption of applied products.*

TANK MIX - *It allows complex mixtures in tanks with low amounts of water, eliminating incompatibility problems and providing greater applicability and allowing for a great application.*

ON THE PLANT - *It is a premium multifunctional adjuvant that enhances the application in multiple ways: conditioning the water, tank-mix stability, coverage, and effectiveness.*



BIODEGRADABLE

Biodegradable products are those that decompose easily through natural bacterial action, meaning they do not remain in the environment. In laboratory tests, this product showed complete biodegradability and was classified as 100% biodegradable. Spraytec advocates sustainable agriculture and contributes to the reduction of waste and pollution of soil, water, and air.
